I am MERN stack developer and I am bringing the tools that are needed to become a MERN a stack developer . I can adapt myself very quickly to new technology which greatly enhances my department knowledge . I have started my developer life by getting very proficient in the following development tools .

### Real time work Experience:

- Did interning I worked on various team projects using a six-month react js in a company called Universe IT and through the same job I am my real I got a beautiful experience in the work .

### Technical Skills:

- **Web Development Tools** : React js , Next js , Redux , TypeScript
- **Frontend** : HTML, CSS, Bootstrap, Tailwind css, JavaScript
- **Source Code Management** : Git & GitHub
- **Databases** : Mongodb  
**BackEnd Comfortable** : Mongodb , mongoose and Nosql database
- **Programming Language** : JavaScript

### Project:

- **Car-wash-system** : [Live-link](#) | [server-live-link](#) | [client-code](#) | [server-code](#)  
**Technology** : Java-Scrip , React js , Redux and Tailwind css  
**Backend** : Mongodb , mongoose and Nosql database system  
**Project Functionality** : In this project I used custom authentication and use that JWT . And an admin dashboard has been created to manage the website . All the APIs I call through the RTK query are fetch the data . Added functionality where user can update his own profile and so that they can manage order and service . And there many other functionalities .
- **Fitness Zone** - [Live-link](#) | [server-live-link](#) | [client-code](#) | [server-code](#)  
**Technology**: JavaScript, React js , Redux and Ant design  
**Backend** : Mongodb , mongoose and Nosql database system  
**Project Functionality**: A management page has been created to mange the products from where the admin can manage the products . A user can find and order the required products by searching and shorting from my products page for physical fitness. The products ordered by the user will be stored in the card page .
- **Food-server** - [Live-link](#) | [server-live-link](#) | [client-code](#) | [server-code](#)  
**Technology**: JavaScript and React js , express js  
**Project Functionality** : This projects uses firebase as authentication and after login a user can order the required . The data for this projects is taken my express server.
